Websites that move.
And get found.

I design and build sites with 3D, motion and real SEO behind them, for schools, contractors, software companies and shops in Ethiopia, the UK and Italy. 30+ websites built.

Adonias Nigussie
Web developer, Addis Ababa

Software and ERP, Ethiopia

Inteltech

Full rebuild, solo: design system, front end, 3D hero, SEO, blog

A software company selling ERP to manufacturers and traders. I rebuilt their approved design from scratch as a static site: 15 pages, an interactive 3D logo in the hero, a circuit-style wave field behind the dark sections, and a blog built around the questions ERP buyers search for.

inteltech.et

Education, Ethiopia

Nucleus International Schools

Full build, solo: design, front end, back end, SEO

A 46-page school site taken from blank page to launch on my own. It reached the top 3 on Google for 8 target keywords within two months, and was built for AI answer engines from day one.

nucleusinternationalschoolsystem.com

Healthcare supply, Ethiopia

EthioLifecare

Full build and redesign, plus an ongoing SEO retainer

Ethiopia's supplier of medicines and medical equipment to hospitals, pharmacies and NGOs. I built the site, gave it a full redesign this year, and still run its search work every month.

ethiolifecare.com

Construction, Ethiopia

Advanced General Contractor

Full build, solo: custom front end, custom admin, SEO

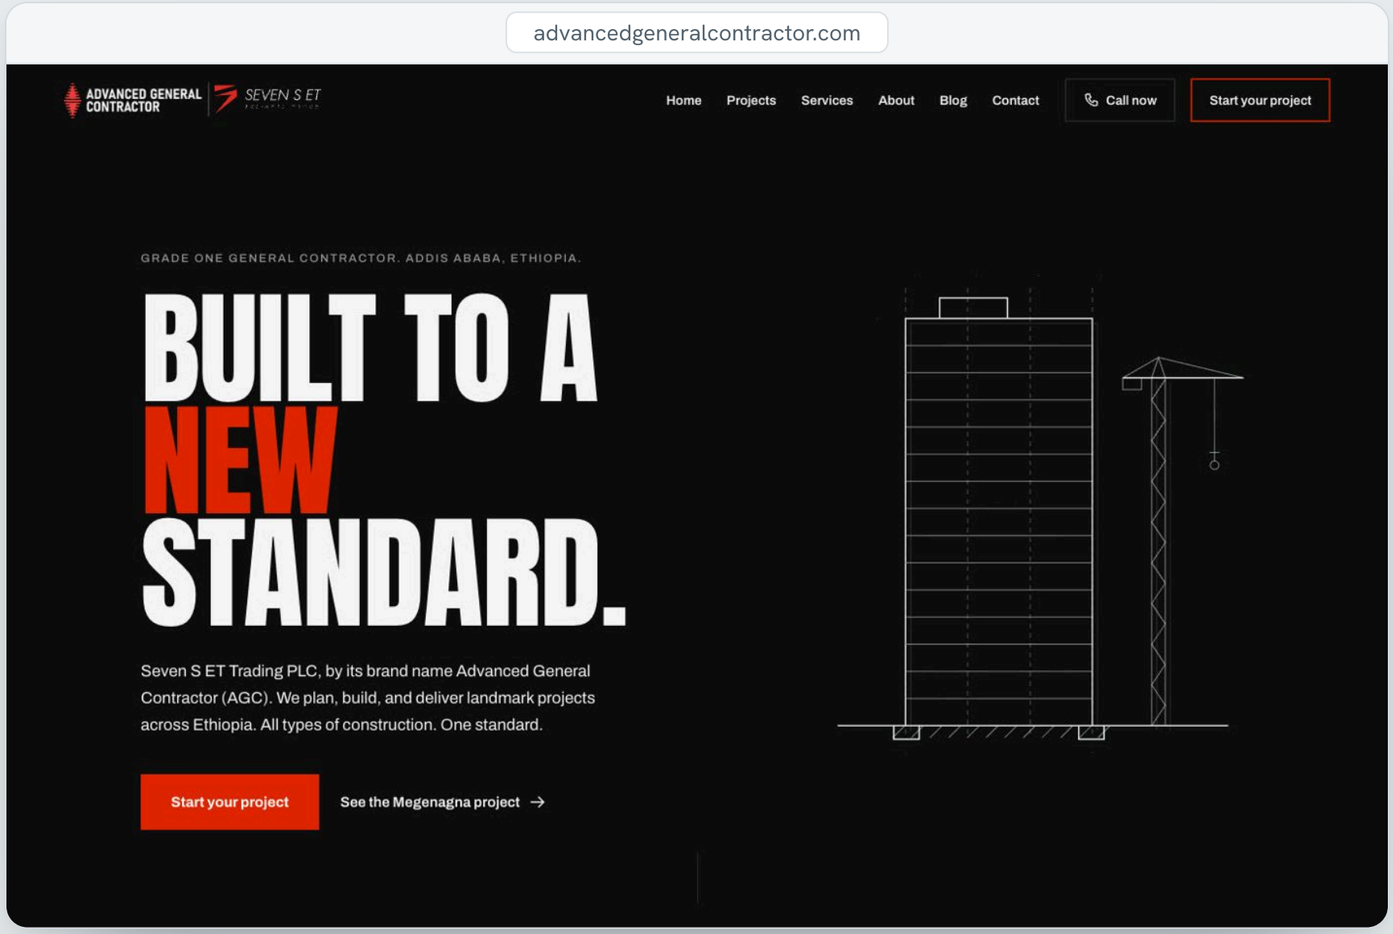

A Grade One contractor wanted easy editing without a heavy CMS. I hand-wrote the site and built a custom admin behind it, so the team edits every page the way they would in WordPress.

advancedgeneralcontractor.com

Community school, Ethiopia

Mekane Selam Senbet School

Full build, solo: ERP back end, hand-coded front end

A full ERP for members, attendance and reports, under a bilingual front end that switches between English and Amharic on the page without a reload.

SaaS

Crib CRM

Product front end solo, back end with the product team

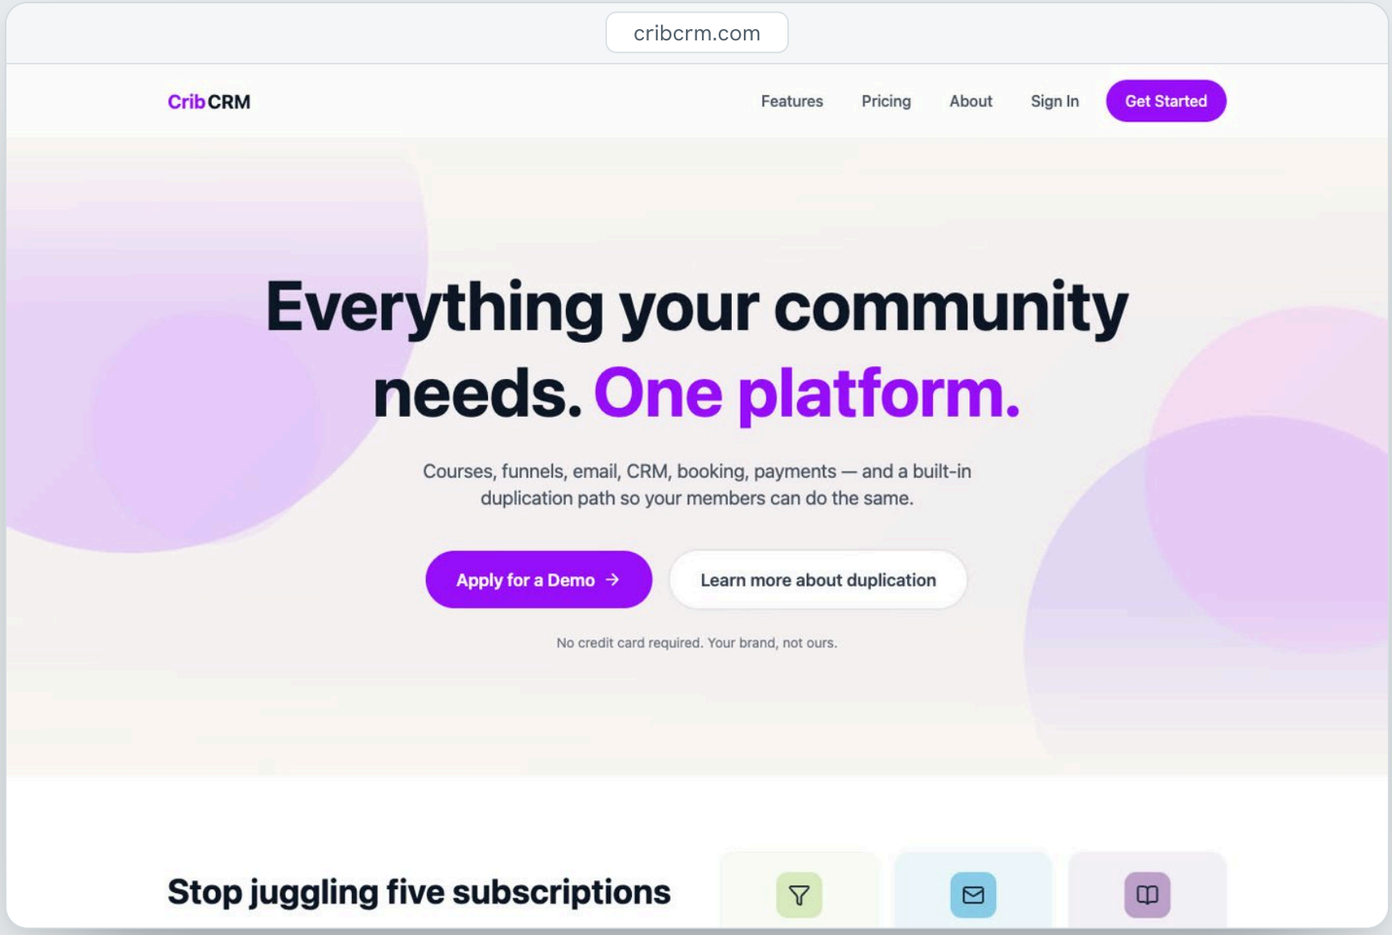

A CRM for network-marketing teams. I own the product front end and shipped two features end to end: the email automation engine and the funnel builder.

My own site

Adonias Codes

Hand-built, deployed on every push

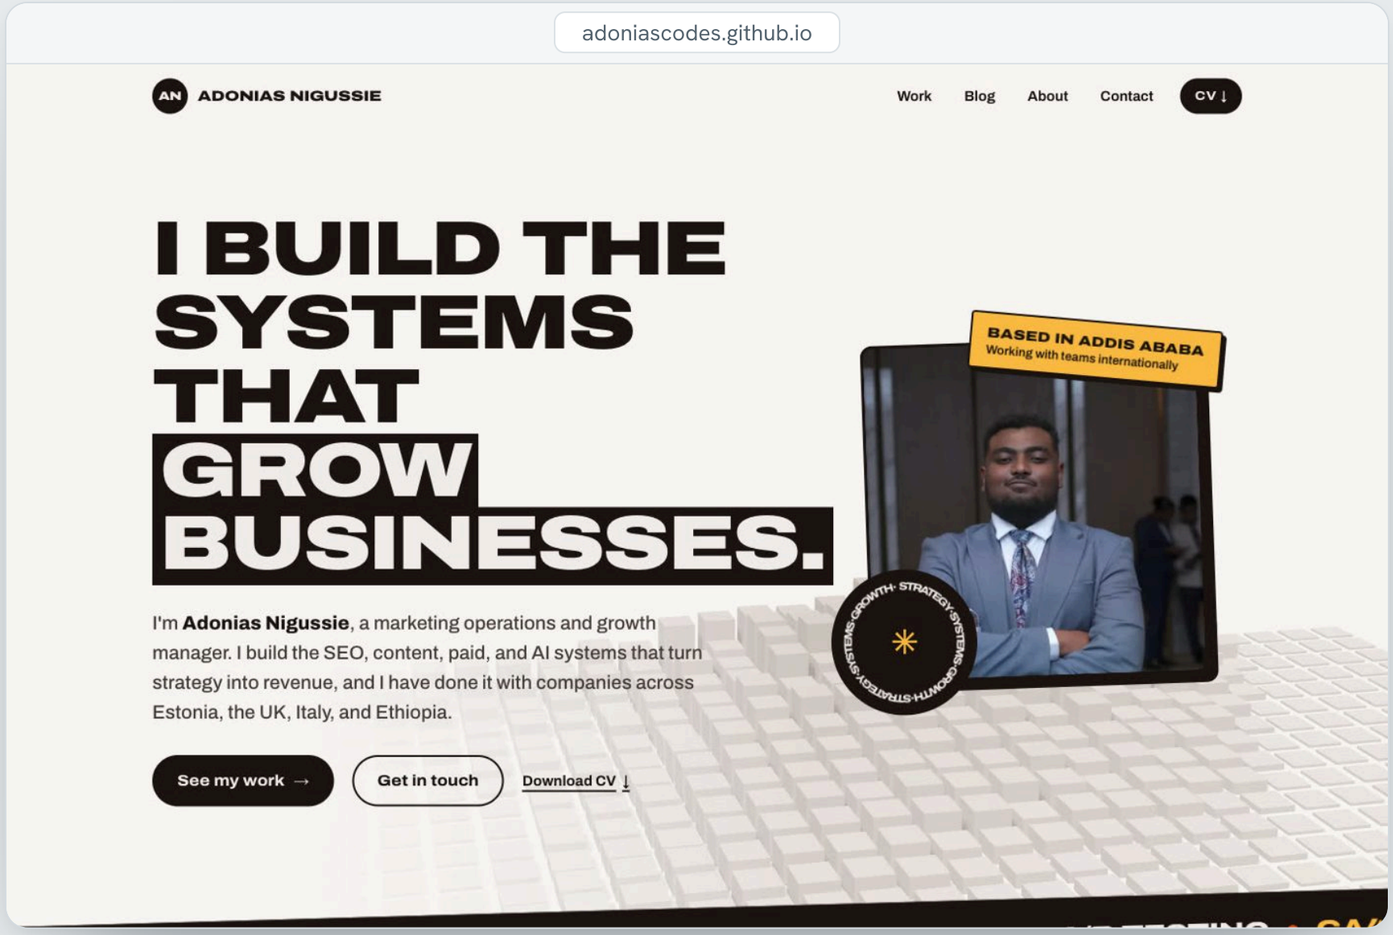

My own site, with a 3D growth terrain in the hero. Green on all three Core Web Vitals, and it ships JSON-LD, a sitemap, robots.txt and llms.txt.

More client sites

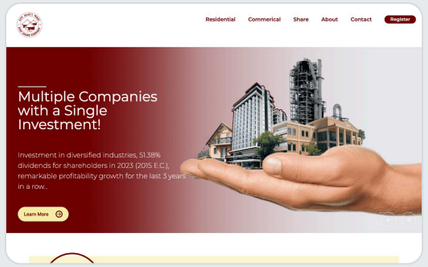

Electric Car Chargers UK

Content and SEO for UK commercial EV charging: 14 keywords in Google's top 3, sales up about 70%.

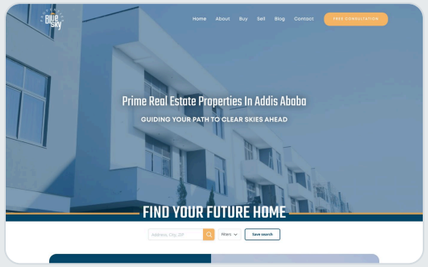

Acrylate

An Italian online store for personalised gifts, built end to end on my own.

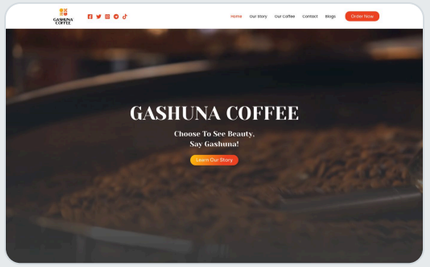

Ayat Real Estate

Development and SEO for one of Ethiopia's largest property developers: organic traffic up about 30%.

Blue Sky Real Estate

Content strategy and SEO behind the property listing pages.

Gashuna Coffee

Brand, social media and a full website for an Ethiopian speciality coffee brand.

Passion projects

Things I built because I wanted them to exist. No client brief, so this is where I try the hardest ideas first.

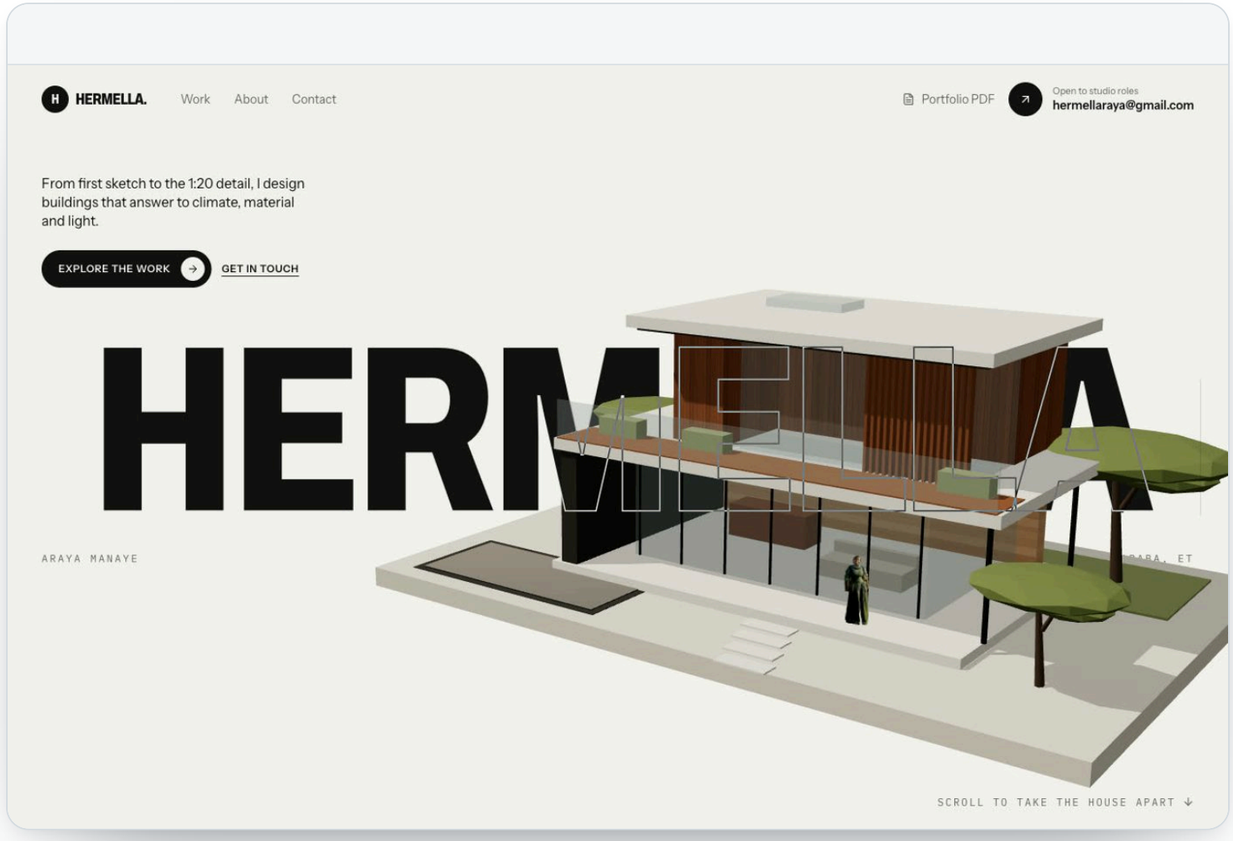

Architecture portfolio with a 3D hero

A portfolio for an architect

A personal site for an architect. As you scroll, a 3D house turns, splits into its four layers, then lifts the upper floors away to show the ground plan. Her photo stands inside the model as the human for scale. After that: a project gallery that tilts in 3D, her quote revealed word by word, and a downloadable lookbook.

- React and Vite, with the 3D built in Three.js (React Three Fiber)
- The house is generated in code, not a downloaded model
- The 3D part loads only when needed, so the page stays fast
- Gallery scrolls on desktop and swipes on phones

> Private project, no public link. Live walkthrough on request.

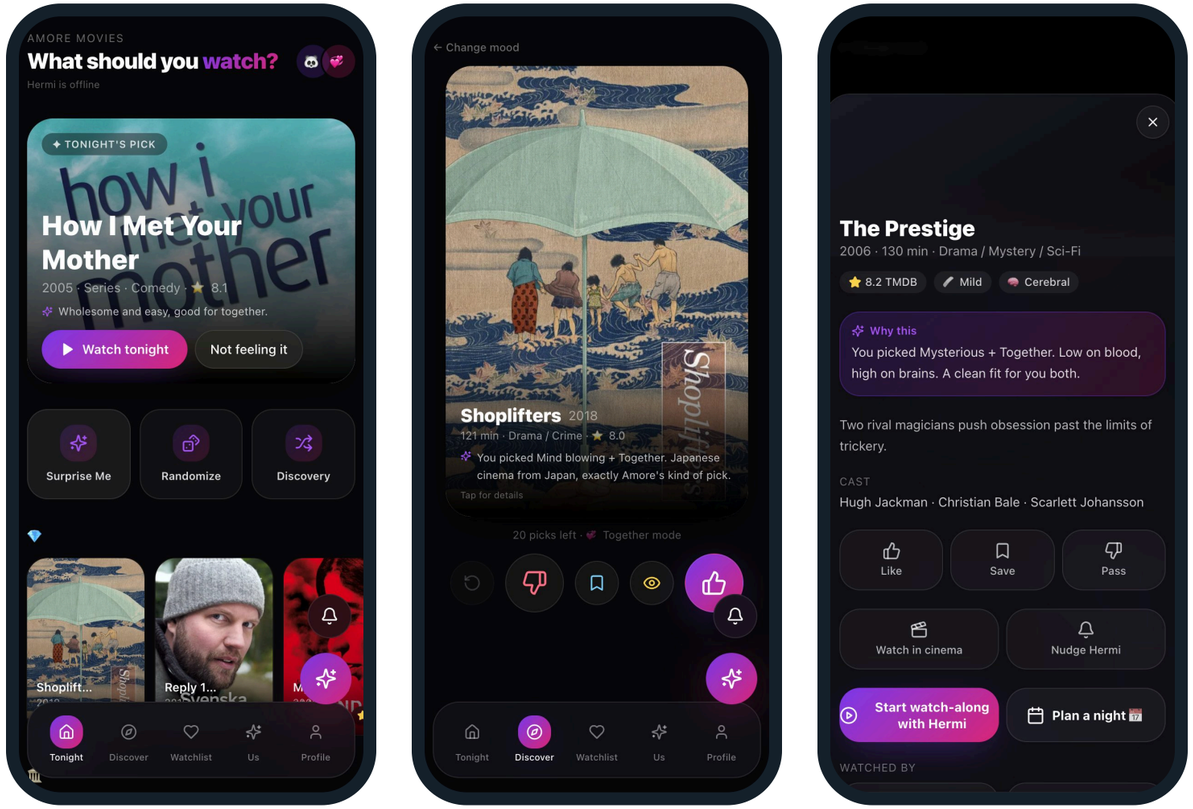

Private app for two, installs on a phone

A movie night app for a couple

Two people who can never decide what to watch each swipe on movies. When both like the same one, the app shows "It's a match" on both phones at once and adds it to tonight's shortlist. It also tracks what they are watching, shows shared taste stats, and has an AI helper that turns a plain request ("something funny, under two hours") into picks with a reason for each.

- Next.js app that installs to the home screen like a native app
- Supabase for login and a shared database; both phones update in about 1.4 seconds
- Push notifications sent from the database itself, so they arrive even on bad networks
- Each person chooses which alerts they get

> Private project, no public link. Live walkthrough on request.

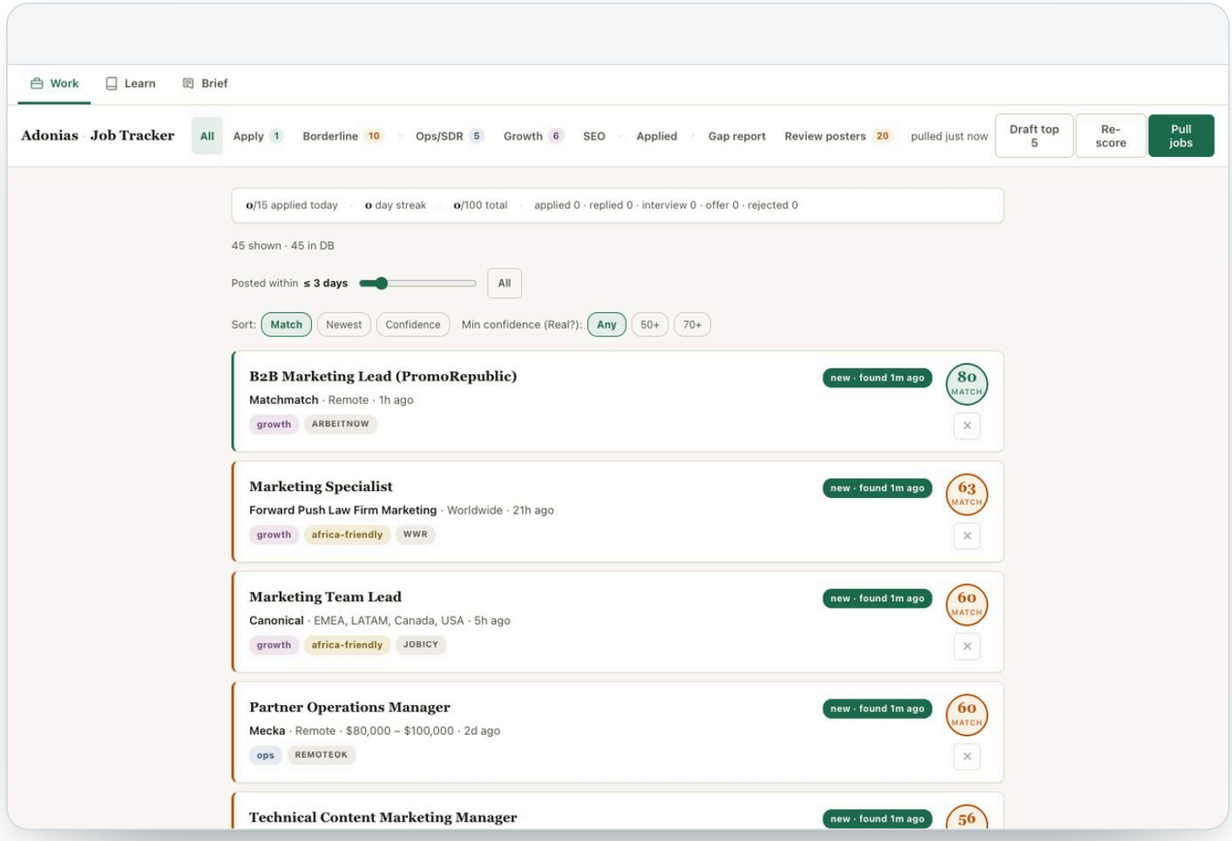

Personal tool: data pipeline with AI

A job portal that reads the job market for me

Every morning and evening it pulls new remote jobs from public job feeds and Telegram channels, keeps only jobs open to someone in Ethiopia, and scores each one against my CVs. It flags stale and fake-looking posts, shows which skills the best jobs ask for that my CV lacks, and drafts a tailored cover letter and CV for a job in the background.

- Python (FastAPI) with HTMX pages and a SQLite database
- Runs on a schedule twice a day
- AI drafting runs in a background queue, so the page never freezes
- Tailored CVs come out as clean PDFs

> Private project, no public link. Live walkthrough on request.

You've seen 16 of 30+.

The rest are presented on request: landing pages, online stores, school systems, internal tools and company sites. Tell me what you are building and I will show you the ones closest to it.
